International collaboration is important!

THE 3rd ICATD Virtual Conference
SEPT 12-13 2020
STARTS AT 10.00AM (GMT +7)

INTEGRATED APPROACHES ON PREVENTION, CURATIVE AND CONTROL OF ZOONOTIC AND EMERGING DISEASES IN AGRICULTURE FIELD

OUR SPECIAL SPEAKERS

KEYNOTE SPEAKER
Dr. Anil K. Singh, Director General, ICAR

CALLS FOR POSTERS & PAPERS!
Selected papers will be published to SCOPUS indexed journal or SINTA (2-4) indexed journal. Other articles will be published in ISSN proceedings.

Topics:
- Current issue on agricultural health
- Tropical diseases
- Zoonosis
- Emerging diseases
- Herbal medicine
- Epidemiology on tropical diseases and zoonosis

Important Dates
30 August : Abstract Submission Deadline
10 Sept : Poster and Fullpaper Submission Deadline
12-13 Sept : Conference Days

Payment and Registration
Registration form, Guidelines, and Submission:

Why people do cyber attacks?

- For fun (attacks almost disappeared)
- For profit
 - Selling valuable data (also your passwords have a market...)
 - Scams
 - Ransoms
- To damage
 - Technically
 - Reputation
- To test the system (without doing damage)
 - Penetration testing /Ethical hacking

Slide navigation pane on the left showing a list of slides from 8 to 12. Slide 10 is highlighted in yellow. The pane includes a 'Gliederung' (Outline) view and a 'Folien' (Slides) view.

Improvements for OSH

Smart farming and other technological developments

- **Labor is replaced by capital – less accidents and illnesses**
- **Improved process control and safety systems management**
- **Reduction of exposure to dangerous substances**
- **Improved work life balance for the farmers**
- **Smart monitoring technologies for health and safety**
- **Regarding forestry, full harvester drastically reduce the risks**

PPT OSH and the future of agriculture Starren Jakob - Microsoft PowerPoint

Future challenges for OSH in agriculture & forestry

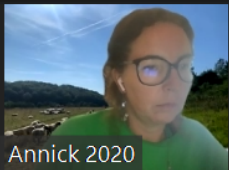

The report has taken a look at a number of trends affecting the future of farming and forestry:

- **smart farming** (precision farming, digitalisation, etc.) and other technological developments
- **climate change** and environmental issues
- **society** and consumer trends
- **labour market** and organisational issues
- **international trade** and economic considerations

WHAT HAPPENS WHEN A LANDSCAPE CHANGES?

Ecosystems complexity

Multifunctionality, heterogeneity (landscape diversity), resilience

Biodiversity

Low soil erosion

Effects on local climate

water purification

beauty

Low vulnerability of the whole system

Ecosystems banalization

Less relationships, landscape diversity and biodiversity, connectivity, resilience

Monofunctionality, specialization, only provisioning services

More energy, water, fertilizers consumption

More pollution (air and water)

High vulnerability

THE LANDSCAPE PARADIGM open to a new approach to safety and health

Covid 19 gave an acceleration: the relationships between habitat lost and degraded, the lost of biodiversity and the diffusion of pandemic is something to deal with

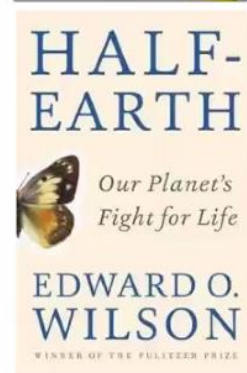

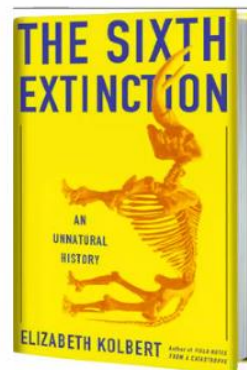

Agriculture and food production are a part of the discussion

Intensive agriculture and its effects on biodiversity are well known

Livestock conditions and their possible role to diffuse zootic pandemic are note as well (maybe also the introduced hunting species)

In 2016, Wilson called for setting aside 50% of the earth's surface for other species as the only possible strategy to solve the extinction crisis.

If not possible, anyway, we have to change our monothematic approach, and go fast to a systemic one, able to manage the complexity of our planet
